This how to guide encompasses the range of review and audit activities undertaken during a project. Reviews and audits comprise the following five modules: Management review. The formal evaluation of a project level plan or project status relative to that plan by a designated review team. Technical review. The evaluation of specified software modules and documents aimed at ensuring that the software modules and documents comply with the applicable standards while conforming to the specifications. The tech-nical review may provide recommendations after the exami-nation of alternatives. Walkthrough. An evaluation process that can result in recommendations for improvement or identification of alternatives to the current software modules or documents being developed. Audit. Provide objective evidence of compliance of products and processes with standards, guidelines, specifications and procedures. Includes audits of the quality management system. Inspection. Rigorous formal evaluations designed to detect and identify defects in...
