FBC LTD, 2017. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****.Excerpt from The Mining Magazine, Vol. 1: Devoted to Mines, Mining Operations, Metallurgy, C.; From July to December, 1853 If we suppose a shaft to be sunk, or a perpendicular excavation made into the earth, upon the border of an extensive plain, skirting a mountainous district, it will first pass, for nearly a hundred feet, through layers of loam, clay, and sand. This deposit from an existing river is denominated alluvium, being the earth resting upon the rocks. The second formation succeeds, which is called drift, or diluvium. This is composed of coarse sand and gravel, with fine sand, containing large rounded masses of rock called boulders. The third series of strata through which the shaft penetrates is composed of layers of clay, sand, gravel, and marl, with occasional beds of quartz and limestone. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.
