Forgotten Books, United States, 2015. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*. Excerpt from Care and Feeding of Dairy Cattle, Vol. 67 A Great Increase in urban population over rural has made British Columbia a large Importer of dairy products, in the last few years our farmers have gone in for dairying more extensively, and the supply of dairy products is beginning to overtake the demand. It will, however, be many years before the home market is fully supplied. The opportunities for the dairy-farmer are many. Dairying is and should be the backbone of our agriculture. The most prosperous Agricultural communities of the world, where intelligent farming reaches its highest level, depend chiefly on dairying. Denmark, Holland, and the Island of Jersey are examples. There are many reasons why dairy-fanning is practiced on the highest-priced lands and pays good returns. The dairy cow is the most economical producer of food of all farm animals. A good cow giving about 7,500 lb. of average milk in a year will produce four times as much solid food as a well-fed steer during the same time. The hog comes next in order to the cow as a profit-maker, and hogs are generally raised on a dairy-farm to consume the skim-milk or buttermilk, thus enhancing the profits. Intelligent dairy-farming tends to conserve and increase the fertility of the farm, unlike exclusive grain or fruit growing, which reduces fertility. The selling of dairy products takes away very little from the land, most of the fertility contained in the crops being returned to the soil in the barnyard manure. The manure from a well-fed cow is worth \$25 a year. Much of this fertility is taken from the air during the growth of the crops,..
